

6-(2-Chloro-4-alkoxyphenyl)triazolopyrimidines, their preparation and their use for controlling harmful fungi, and compositions comprising these compounds

Abstract

5

Substituted triazolopyrimidines of the formula I

I

in which the substituents are as defined below:

10 L is hydrogen, chlorine or bromine;

R<sup>1</sup>, R<sup>2</sup> are hydrogen, alkyl, haloalkyl, cycloalkyl, halocycloalkyl, alkenyl, haloalkenyl, cycloalkenyl, halocycloalkenyl, alkynyl, haloalkynyl or phenyl, naphthyl or a five- or six-membered saturated, partially unsaturated or aromatic heterocycle which contains one to four heteroatoms from the group consisting of O, N and S,

15

R<sup>1</sup> and R<sup>2</sup> together with the nitrogen atom to which they are attached may also form a five- or six-membered heterocyclyl or heteroaryl which is attached via N and may contain a further heteroatom from the group consisting of O, N and S as ring member and/or may be substituted as defined in the description;

20

R<sup>3</sup> is alkyl, haloalkyl, alkenyl, haloalkenyl, alkynyl, haloalkynyl, cycloalkyl, halocycloalkyl or phenylalkyl;

25 R<sup>1</sup>, R<sup>2</sup> and/or R<sup>3</sup> may be substituted as defined in the description;

X is halogen, cyano, alkyl, haloalkyl, alkoxy or haloalkoxy;

processes and intermediates for preparing these compounds, compositions comprising them and their use for controlling phytopathogenic harmful fungi.
